COMMERCIAL LINES NOTICE NO. 127

Radius of Operation and Rating Territory Commercial Manual Rule Filing

On February 28, 2019, CAR filed a Commercial Automobile Manual Rule filing with the Division of Insurance (SERFF filing CARI-131844264), including proposed amendments to Section III – Trucks, Tractors and Trailers, and Section V – Public Transportation.

These proposed changes are intended to clarify the determination of radius class, the assignment of zone combination, and the determination of geographic classification for non-zone rated risks. In addition, amendments to Section V restore the use of garaging location in the determination of radius class and set forth specific instructions in assigning rating territory for non-zone rated risks in the event that the risk demonstrates that 80% of the vehicle's operation is outside of the highest rated territory through which or to which the vehicle operates.

Note that this filing is under review by the Division of Insurance and has not yet been approved.

The proposed Commercial Automobile Manual Rule amendments are available to Member Companies upon request. Request should be directed to Shannon Chiu at schiu@commauto.com.

TIMOTHY GALLIGAN
Actuarial & Statistical Services Director
